Continental

Discover how Continental is evaluating software engineering skills remotely with CodeInterview

QUICK FACTS

- Customer: Continental
- Employees: 230,000+
- Industry: Manufacturing
- HQ: Hanover, Germany
- Customer since: Mar 2021

"Codeinterview has become an integral tool for our technical interviews."

Petar Grbić
Group Leader in Software Development at Continental

HERE'S THE CONTEXT

Continental is a pioneer in automotive parts manufacturing, most notable for their leading position as a tire producer.

The Base Software and Tooling Group in Novi Sad builds Continental's software platform that gives application developers a complete hardware abstraction.

The group is also responsible for developing internal tools to streamline both engineering and manufacturing.

WHAT WAS THE ISSUE?

As the Covid pandemic hit the world, Continental had to enable remote, online interviews in order to safely grow their software engineering department.

During his research, Petar Grbić received a recommendation from a colleague in another location to try out CodeInterview.

HOW CODEINTERVIEW HELPED

The Base Software and Tooling team is now able to evaluate software engineering skills during online interviews.

In particular, they are using the collaborative code editor in the Embedded C set of language extensions. They also rely extensively on the virtual whiteboard and template questions functionality.

This allows Continental's tech team in Novi Sad to effectively evaluate software engineers remotely, recreating an in-person experience as much as possible.

FEATURES THEY LOVE

- Real-time code editing - discuss and debug solutions with your candidate.
- Templates - save and load common questions in 30+ languages.
- Whiteboard Mode - toggle a virtual whiteboard to illustrate problems and solutions.

MAIN OUTCOMES

During the last 2 years, Continental's Base Software and Tooling Group expanded by 350 employees. This growth was supported by CodeInterview as the main solution for technical interviews at the location.

As per Petar's own words, CodeInterview became essential for evaluating software skills in online interviews.
